

becopotty
the eco-friendly potty

Made from
plant fibres

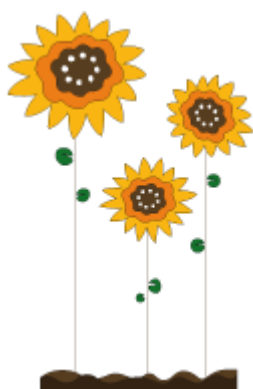

- a little potty idea

When your child finally finishes potty training, they can plant their potty in the garden.

*Just a little tip... Drill a couple of holes in the bottom of the potty to let the moisture through.**

Once the Becopotty is fully submerged, add some seeds, a little water and watch their flowers grow.

Over the next few years your potty will biodegrade, feeding your flowers and helping the environment.
