

Dutch Harvest

Hemp tea from Dutch Soil

Information for resellers, May 2017

Local product

Our hemp tea is locally grown in the Groningen, In the North of the Netherlands. In this area, the former strawboard factories were established. The disappearance of this industry caused a high unemployment in this region. But since the 1990's hemp has made its entrance in this Groningen. Nowadays, several farmers together grow over 2000 hectares of hemp, providing a new economical impulse to this region.

Sustainable crop

The hemp plant grows in the summer, where the summer sun stimulates it to reach a stunning 3 meter height in only 100 days!

Hemp doesn't require any spraying, improves the soil structure and breaks down vast amounts of CO₂.

All parts of the plant are being used. The fibers are used in insulation materials and bioplastics. The wooden core of the plant is used for building materials and from the leaves and flowers, we make this special tea.

What does it taste like?

Our hemp tea, (officially: hemp 'infusion'), is made of the leafs and flowers of the hemp plant. This results in a mild tasting tea, fresh and slightly sweet, with a bit of a spicy after taste. It is often called a 'mild version of green tea'.

Tea sommelier

Tea sommelier Karlijn Dapper is winner of the Dutch Tea Championship 2015. She has helped us with the delicate process of developing the best hemp tea, and with composing the three blends.

The blends

Dutch Harvest is available in a pure variety, 'Simply Hemp', and three exquisite blends. We make the blends ourselves, and we do not add any aroma's. So the taste is as pure as mother nature created it,

Sustainable packaging

The loose leaf tea comes in block bottom packages. This packaging is a combination of bioplastic (on the basis of cellulose) and of 'Paperwise', paper made from agricultural waste. This means the tea bag is compostable.

Packed with dedication at a social enterprise

Dutch Harvest is packed at a social enterprise, providing sheltered employment to people with disabilities. They do a great job packing the tea with great precision and dedication. At the same time, we can offer them a meaningful daily pursuit.

Order quantities

Retailers can order Dutch Harvest in units of 8 or 48 packages per flavor.

Promotion material

There are several promotional materials available in Dutch, English and Danish. In consultation with the retailer, we can also develop custom made materials

Also, we there are many images and short video's of the tea available, which the retailer can use for his own website or (social) media.

Frequently asked questions

Growing hemp, is that even allowed?

Yes, the hemp varieties used by Dutch Harvest can legally be grown in The Netherlands. We use varieties of the so-called 'fiber'-hemp, that comply with the EU maximum norm of 0,2% THC (THC is the psychoactive substance of which 'marihuana'-hemp usually contains 5 up to 20%). This means our hemp cannot have any psychoactive effect.

Can I get stoned by drinking Dutch Harvest tea?

No, you can absolutely not get stoned by drinking Dutch Harvest hemp tea. The hemp plants that we use for the tea have only a negligible amount of the psychoactive compound THC, which means the tea can not get you 'high' or stoned.

What does the hemp tea taste like?

Hemp tea is mild, fresh, and slightly sweet with a delicate spicy aftertaste. Some people compare it to the taste of green tea, but less bitter, others describe it as a fresh variation of chamomile tea. Anyway, hemp tea has it's own unique flavor, and one swig says more than a hundred words. So taste it, and see for yourself!

How to prepare hemp tea?

Everyone has his or her own way of preparing tea, and that is ok. As a guideline we suggest: put Dutch Harvest in a tea-egg or filter (about 2 teaspoons for a cup), make sure there is enough space for the ingredients to unfold. Boil water and pour it over the tea. Let the tea infuse for about 5 minutes. We advise you to then remove the tea-egg or filter so the tea does not get too strong.

Can hemp tea help in treating a disease?

Hemp leaves contain Cannabidiol (CBD). For centuries the plant was therefore used as a medicine against several diseases, and now the effects are rediscovered. An increasing amount of studies show the positive effect of CBD on the immune system and the central nervous system. Therefore, especially in the US, CBD is now being extracted from the leaves and the flowers from the plant and is used to treat among other things muscular diseases, depression, insomnia, and inflammatory diseases like rheumatism and arthritis.

The hemp tea only contains a very low concentration of CBD and can thus not be regarded as a medicine.

How can I best preserve Dutch Harvest Hemp tea?

You can just preserve it in the package in which you have bought it. Of course you can also keep the tea in an airtight tin. Make sure not to keep the tea next to other herbs and spices with a strong aroma, so the tea will not pick up on others scents and flavors. Always store the tea in a dark, cool and dry place (but not in the fridge!).
